

Model ZCDWL

Whole Home Comfort and Energy Savings In Every Season

The award winning ZCDWL 2-Zone Wireless Comfort Control works with your existing thermostat to solve the comfort problem found in two-story homes, where the upstairs is too warm during the summer and the downstairs is too cold during the winter.

While the thermostat controls the temperature in the home, the ZCDWL controls the airflow and automatically directs more heating or cooling to the zone that needs it to provide whole home comfort plus energy savings in every season.

Whole Home Comfort Plus Energy Savings

The ZCDWL provides whole home comfort by automatically directing more heating or cooling to the zone that needs it to keep the upstairs and downstairs temperatures within 2 degrees.

 Reduces the wasted energy caused by overcooling your downstairs zone in the summer to make your upstairs zone more comfortable or overheating your upstairs zone in the winter to make your downstairs zone more comfortable.

Focused Comfort Plus Energy Savings

Focused Comfort enables you to manually focus more heating or cooling to the upstairs or downstairs zone as desired and less to the unoccupied zone and is ideal for homes with an upstairs home office or homes where the upstairs is rarely used.

 Reduces the wasted energy used to heat or cool the unoccupied zone and saves energy by satisfying the call sooner or using lower, more energy efficient set to temperature settings without sacrificing comfort.

Comfort and Energy Savings at Night

The Nighttime Comfort option saves 30% in energy at night by automatically directing 30% more heating or cooling to the upstairs sleeping zone and 30% less to the unoccupied downstairs zone.
